

ROBERT HENDERSON

Fort Collins, CO | 510.241.7641 | roberthenderson.me | hello@roberthenderson.me

Frontend engineer and technical lead with 15+ years shipping production web applications, including eight years at lead level on enterprise platforms at Salesforce and Vlocity. Currently own a company design system, an internal ops platform, and the customer dashboard at a fintech; outside work, founded an LLC and shipped a cross-platform app to both app stores as sole engineer. Strongest at turning complex workflows into clear, fast, accessible React and TypeScript interfaces.

EXPERIENCE

Senior Software Engineer

July 2025 - Present

Sphere Labs | Remote

Frontend and full-stack engineering across three products for a global money-transfer platform: a shared design system, an internal operations platform, and the customer-facing enterprise dashboard.

- **Led the ground-up redesign** of spherepay.co, the **enterprise dashboard** for global money transfers (**Next.js, React, TypeScript**), rebuilt on the company design system from new product designs; shipped in 2026
- **Led implementation and UX direction** for integrator (B2B2C) customer support: a CRM-style model of the dashboard with entity list views and record detail pages, drawing on enterprise platform patterns from prior Salesforce work
- Created and own **@sphere/ui**, the company **design system** built on shadcn and Tailwind v4, published via GitHub Packages with an automated release workflow and consumed by every production frontend to enforce consistent, **accessible** UI patterns
- Built a custom Vite-based component explorer in place of Storybook, rendering stories inside the system's own layout components so documentation mirrors real product usage; partner with the product designer to turn pattern-library designs into production components
- **Designed the full architecture** of an internal ops platform (Next.js full-stack) where teams such as banking, crypto vaults, and liquidity management create their own org and compose dashboard pages from configurable components (data tables, repeated cards, actions, display blocks) wired to their own APIs, with no engineering involvement
- Led the end-to-end UX redesign of the ops platform as sole design owner, improving layout consistency and usability on a product without dedicated design support
- Rebuilt spherepay.co authentication to run server-side, moved key views to **SSR**, and introduced **optimistic updates** where they improve perceived speed without risking data integrity

Founder & Engineer

April 2026 - Present

Loftery LLC, Eider | eider.app | Fort Collins, CO

Founded Loftery LLC and solo-built Eider, a cross-platform expense-splitting app live on the App Store and Google Play. Sole owner of product, design, engineering, release, store compliance, and marketing. Ongoing alongside full-time work.

- Shipped from an empty repository to public listings on both stores in under five months, clearing Apple App Review (Sign in with Apple, privacy labels, EU trader verification) and Google Play's closed-testing gate, Data Safety declarations, content rating, and account-deletion requirements
- **Architected a Turborepo monorepo** shipping one product to three surfaces: a Next.js 16 / React 19 web app, an Expo / React Native iOS and Android app, and a Cloudflare Durable Objects realtime service, sharing ~290 paired web and native components and 3,700+ localized strings from a single source
- Built a **no-loader, no-layout-shift client**: reads paint their final layout on first frame from a warm TanStack Query cache, writes are optimistic with rollback, and live balances push to every signed-in device over a Durable Object event bus
- Designed the data layer: a 48-model Prisma schema on Neon Postgres with 125 versioned migrations, field-level encryption for financial tokens, and 144 API routes as thin adapters over portable domain functions; integrated Plaid for bank import and Stripe, Apple In-App Purchase, and Google Play Billing behind one cross-platform entitlement layer
- **Own quality and release operations**: 1,700+ test files, 160 Playwright end-to-end specs, 69 Maestro mobile flows, a pre-push gate (format, lint, typecheck, unit, Postgres integration), a dev to staging to production promotion pipeline with nightly e2e, and EAS over-the-air updates, shipping weekly

Founder, Engineer

February 2025 - July 2025

Umbrellx | umbrellx.io | Independent project

Designed and built an LGBTQ+-focused social media app to pre-alpha (Next.js, React, TypeScript, Supabase, MUX).

- Owned product, branding, and UX end to end; shipped as a responsive PWA with service-worker notifications
- Built viewport-aware prefetching of routes and data and a custom aspect-ratio post grid, treating performance as the primary UX lever

Senior Software Engineer L5

September 2023 - December 2024

Magic Eden | Remote

Frontend engineer on the client application of Magic Eden, a digital asset marketplace built in React, Next.js, and Tailwind with millions of monthly visitors.

- **Led and built** the ability to mint and buy secondary-market digital assets with a credit card, and added a widget for users to buy crypto by card to top up their wallet
- **Led a profile redesign** that let users select digital assets from multiple blockchains and showcase them in one group
- Worked with UX designers to create an email-only crypto wallet inside the application, balancing security, privacy, and UX
- Triaged and fixed production bugs in a codebase deployed four or more times per day

Senior Software Engineer

July 2022 - July 2023

Metaplex Studios | Remote

Built Creator Studio, a first-party Solana application and no-code tool that lets NFT creators launch a collection without hiring a developer.

- Built the app on a React, TypeScript, AWS Amplify stack with Chakra UI, following React best practices for client-side performance
- Designed GraphQL APIs through AWS Amplify; collaborated with UX designers and improved web3 UX with a derived signer and combined transactions

Lead Software Engineer, LMTS

August 2018 - July 2022

Salesforce | San Francisco, CA

Architected and led the Employee Service Catalog Builder, a web-component application with a custom drag-and-drop library and async data loading to meet page-time SLAs, built performant and **fully accessible** from the ground up.

- Frontend lead working with architects on the data model; built Lightning Web Components with clean-code principles and the builder pattern in both JavaScript and Java; **mentored junior engineers** through pairing and code review
- Created unit and functional coverage with **Jest**, Java unit tests, and **Selenium end-to-end tests**; partnered with product managers and UX designers on requirements, spikes, and mocks focused on usability and performance
- Previously led the team building Employee Services Search, a custom search engine over Salesforce records with a custom state manager for filtering and scoping, and debounce and stencil techniques for perceived performance
- Contributed UX, performance, and security fixes to global Salesforce CRM Search, used by millions daily, including leading a project to surface per-entity result counts in the left navigation

Lead Frontend Software Engineer

April 2015 - August 2018

Vlocity | San Francisco, CA

Developed industry-specific cloud software on the Salesforce platform.

- Built scalable AngularJS applications on the Salesforce platform and contributed to internal build processes
- Led development of a mobile app with responsive design, lazy loading, and filterable products; architected a client-side rules engine in AngularJS tested with Jasmine; shipped Vella, a consumer insurance app (Ionic, iOS and Android)

Senior UI Developer

July 2010 - March 2015

Blue Acorn | Charleston, SC

Built enterprise-scale responsive e-commerce sites (Magento, SASS, JavaScript, PHP) measured on conversion rate, using Optimizely and Google Analytics to test and improve UI; trained new frontend developers.

SKILLS

Frontend: TypeScript, React, Next.js, React Native, Expo, Tailwind, shadcn, TanStack Query, Lightning Web Components, accessibility, SSR, responsive design, design systems

Backend and data: Node.js, PostgreSQL, Prisma, Neon, GraphQL, REST, Java, Cloudflare Workers and Durable Objects

Testing, delivery, and integrations: Playwright, Maestro, Vitest, Jest, Selenium, GitHub Actions, EAS, Vercel, Turborepo, Stripe, Apple IAP, Google Play Billing, Plaid, Sentry, PostHog

EDUCATION

Art Institute of Charleston, Associate of Arts in Web Design & Interactive Media, 2011

College of Charleston, Bachelor of Science in Business Administration, 2009
